### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

as the Applicant shows in figures 3 & 4, labeled PRIOR ART, and in the prior art disclosed, Sheidler et al (6468153, cited by the Applicant) & Stickler et al (5088960, cited by the Applicant), the preamble of the claim is well established, including enhancing the air flow in directing it to the surface of the separating unit for blowing off chaff and other debris (guide vane ref 58 providing an even flow of air within the duct work Stickler, col. 2, ln 56-57), while Sheidler even improves on it by teaching in col. 4, ln 9-14, a neck portion (ref 76) which prevents the air to swirl upwardly, thus preventing air from swirling back toward the inlet, which feature also claimed in independent claims 1 & 5, last line.

However, as recited:

"at least one airfoil transversely extending across the conduit, the airfoil comprising a leading edge, a trailing edge located downstream from the leading edge, a thickness, and a chord extending from the leading edge to the trailing edge, the chord having a chord length substantially less than the length of the conduit, the airfoil being adapted to encourage airflow downward toward the outlet and to discourage air from swirling back toward the inlet"

including the specifics of the airfoil as outlined above is not disclosed and shown in the Prior Art along with the combination presented in the preamble.

Art Unit: 3671

It is noted that the conduit or clear conduit of the ductwork, and the conduit of the airfoil (claims 4 & 9; line 1) is definite in the context it is recited.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
